

Tray Layouts

Composed bench trays normally consist of end-middle- and division trays.

End trays.

An end tray finishes the bench. Therefore there is always an end tray on each end of a bench tray.

End trays are delivered as standard with a valve sump, but can also be delivered without valve sump. In many cases it is not necessary with 2 valve sums in a short bench tray.

End tray with valve sump

End tray without valve sump

Middle trays.

Middle trays are used as needed, all depending on the desired length of the bench tray.

Middle tray

Division trays.

Division trays are tray pieces that are adjusted a specific measurement so the total tray top gets the exact required length.

Division tray

Examples of configurations.

Consisting of an end tray with sump, a division tray, three middle trays and an end tray without sump.

Bench tray consisting of an end tray with sump, a division tray and an end tray without sump.

Bench tray consisting of an end tray with sump and a shortened end tray without sump.

Bench tray consisting of a shortened end tray with sump and ended with a strip glued on.
